8. EXPOSURE CONTROLS / PERSONAL PROTECTION

8.1 Control parameters**Exposure standards**

Ingredient	Reference	TWA		STEL	
		ppm	mg/m ³	ppm	mg/m ³
Calcium silicate (a)	SWA (AUS)	--	10	--	--
Quartz (respirable dust)	SWA (AUS)	--	0.1	--	--

Biological limits

No biological limit values have been entered for this product.

8.2 Exposure controls

Engineering controls Avoid inhalation. Use in well ventilated areas. Where an inhalation risk exists, mechanical extraction ventilation is recommended. Maintain dust levels below the recommended exposure standard. Significant dust and respirable quartz may be generated during the machining of this product and efficient local exhaust ventilation at the point of dust emission is strongly recommended. Respiratory protection (e.g. minimum P2 particulate respirators) is required to be worn by operators if exhaust ventilation is not effective in keeping exposures below the Exposure Standard.

PPE

Eye / Face If cutting or sanding with potential for dust generation, wear dust-proof goggles.
Hands If cutting or sanding with potential for dust generation, wear leather or cotton gloves.
Body Not required under normal conditions of use.
Respiratory If cutting or sanding with potential for dust generation, wear a Class P1 (Particulate) respirator.

11. TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Health hazard summary Low toxicity - irritant. Under normal conditions of use, this product is not anticipated to present a hazard unless product is cut, drilled or sanded with the generation of irritating dust. Use safe work practices to avoid dust generation - inhalation. The calcium silicate in this product is in the non fibrous form and is non respirable. Sand may contain a mixture of different crystalline forms of silica, as well as amorphous silica. The crystalline forms (quartz and cristabolite) may cause lung fibrosis (silicosis) and are classified as carcinogenic to humans (IARC Group 1). The coarse granular nature of sand product form reduces the potential for inhalation.

Eye Due to product form, the potential for exposure is reduced, unless cut or heated and dust or fumes generated.

Inhalation Exposure considered unlikely. An inhalation hazard is not anticipated unless this material is cut, drilled or sanded with dust generation, which may result in mucous membrane irritation of the upper respiratory tract with over exposure. Crystalline silica is classified as carcinogenic to humans (IARC Group 1).

Skin Low irritant. Prolonged or repeated exposure to dust may result in mechanical irritation and dermatitis.

Ingestion Ingestion is considered unlikely due to product form.
No LD50 data available for this product.
